Dear Recipient,

It is with much enthusiasm that I am writing to recommend the chemicals and services of the ClearFlow Group.

For the past two maintenance seasons we have been utilizing the Water lynx polymer for assisting in the dewatering of Phosphate and Lime sediment in various process ponds at the large chemical facility in Joffre, Alberta.

We took a chance shifting from another supplier to Clearflow and have never looked back since. The chemical provided has produced superior results, and significantly reduced our polymer consumption on the project as a whole. This past season we ran into issues with a layered sedimentation, which required constant adjustments to our Water Lynx addition. Clearflow was able to provide a technician who performed analysis the sediment, and assisted in the development of a clear path forward. Their diligence and knowledge of their product, and the operation as a whole, was paramount in ensuring that our project continued to operate well ahead of schedule.

I happily endorse their Water lynx polymer products, and their professionalism and technical abilities in these matters are second to none.

Sincerely,

Daniel Chisholm E.I.T.
